

Table 6: Date of Birth / Age — Harmonization Complexity Spectrum

Survey	Source Question	ACS Question	Tier	Barrier	Note
FOODAPS	What is your date of birth?	What is Person N's age and date of birth?	F1	NHB.0	Identical construct
CPS	What is (name's/your) date of birth?	What is Person N's age and date of birth?	F1-F2	RS.1	Compound vs single question
CPS	Best guess as to how old on (your/his/her) last birthday?	What is Person N's age and date of birth?	F2	CC.2	Off by up to 364 days
CPS	That would make (name/you) approximately AGE years old. Is that correct?	What is Person N's age and date of birth?	F3	RS.1	Verification probe, not elicitation
CPS	(Were/was) (name/you) born a citizen of the United States?	Is this person a citizen of the United States?	F3	CC.1	Birthright vs any-path citizenship

NHB.0 = no barrier | RS.1 = reference scope mismatch | CC.2 = construct precision difference | CC.1 = fundamental construct mismatch
 Same demographic concept (age) spans the full tier range depending on operationalization.
